Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am an	I'm trying to	The current	Because request	Which makes me feel uncertain

	employee who needs a company car for official travel.	submit a car rental request with travel dates, pickup/drop-off details, car type and other required information.	manual process can involve emails, phone calls and repeated follow-ups with the transport team.	information is not captured and routed through one standardized workflow.	about the request status and whether the vehicle will be available on time.
PS-2	I am a transport/admin team member responsible for processing car rental requests.	I'm trying to review requests, obtain the required approval and arrange an available vehicle or rental service.	Requests may arrive with missing information or without a clear approval and assignment path.	Because there is no single automated process connecting the employee, approval and transport teams.	Which makes the work time-consuming and increases the chance of delays or missed requests.

Project-Specific Problem Statement

Employees need a simple and standardized way to request a car rental for official travel. The organization needs an automated ServiceNow process that captures complete request details, routes the request for approval, assigns it to the appropriate transport team, communicates status updates and maintains a traceable Requested Item (RITM) record.

Maximum Marks	4 Marks

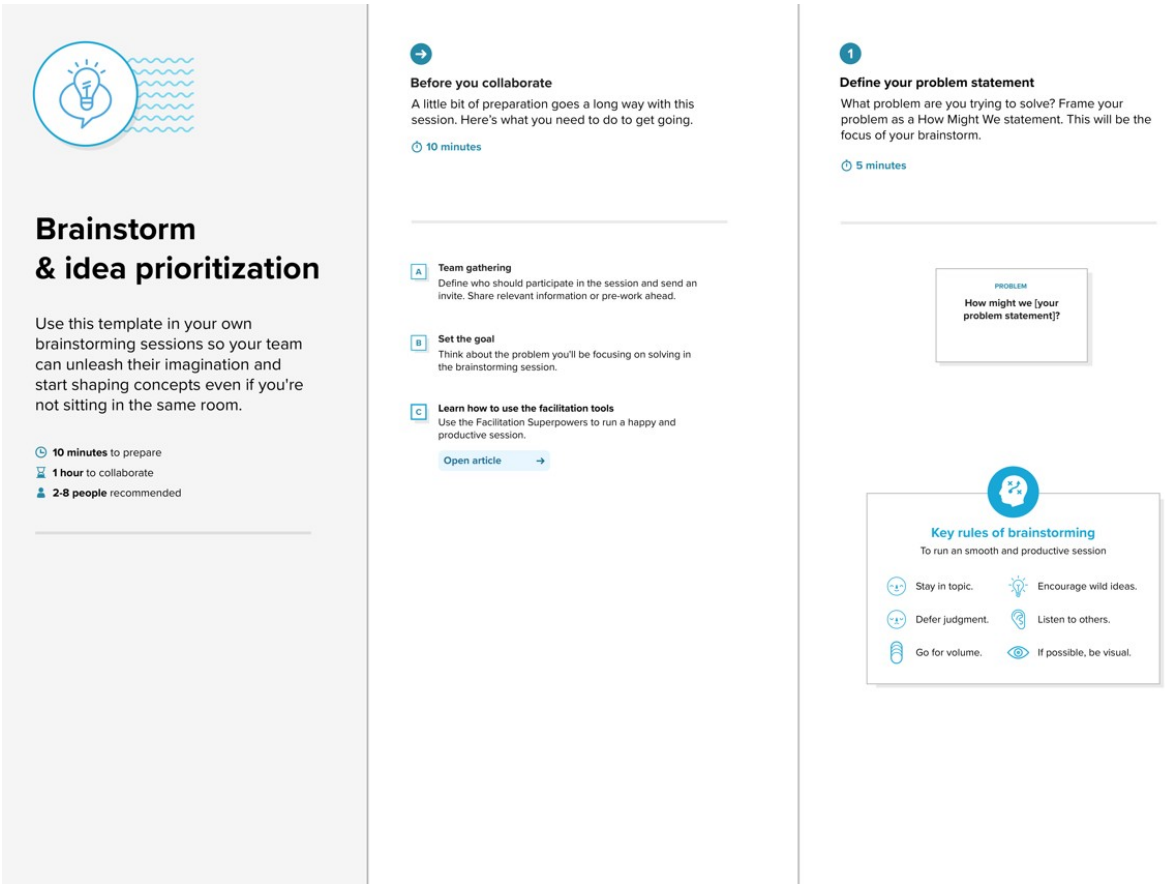

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

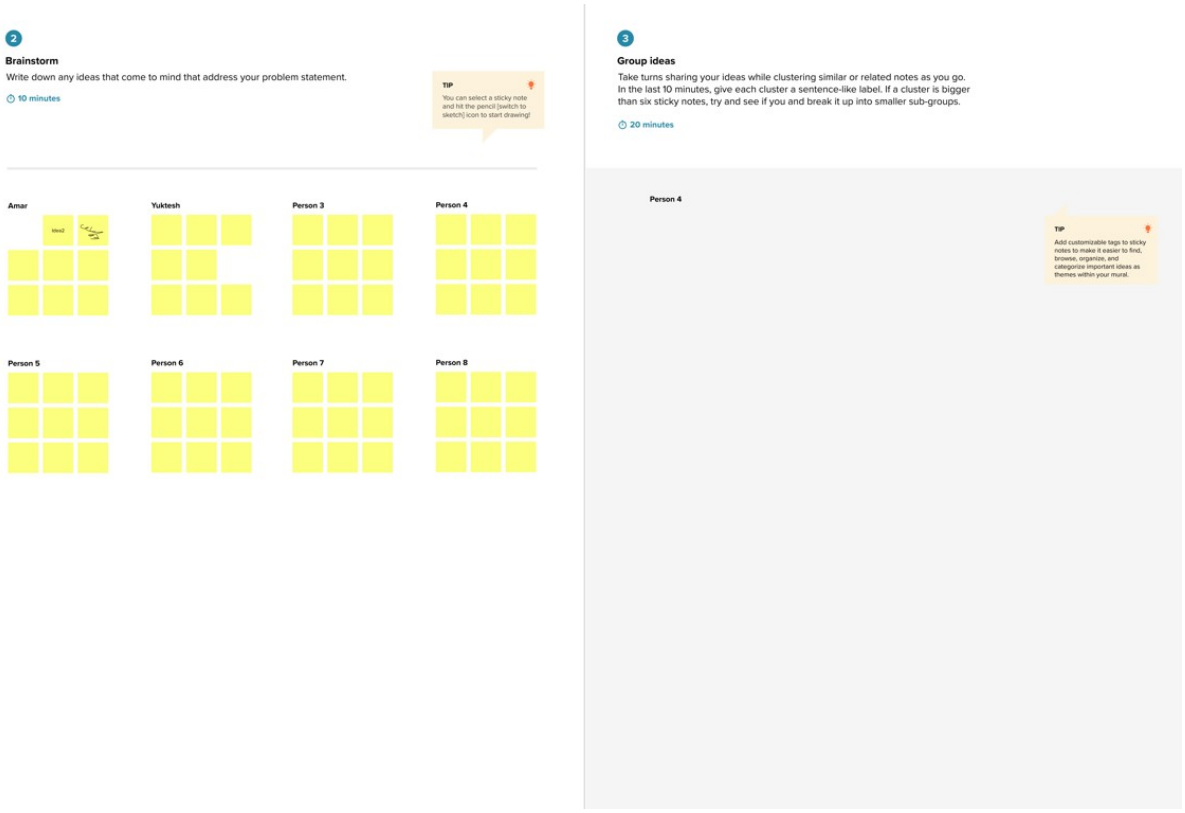

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

Step-3: Idea Prioritization

Car Rental Request Automation – Brainstorming Results

The team brainstormed possible solutions for improving the car rental request process in ServiceNow. Ideas were grouped around request submission, validation, approval, assignment, notification, tracking and reporting.

Step 1: Team Gathering, Collaboration and Problem Selection

Selected problem: Employees do not have a single, standardized and trackable process for requesting a rental car for official travel. The solution should reduce manual coordination and make request status visible.

Step 2: Brainstorm, Idea Listing and Grouping

Category	Idea	Purpose
Service Catalog	Create a Car Rental Request catalog item.	Provide one standard entry point for employees.
Request Details	Capture pickup/drop-off location, dates, time, car type, purpose and remarks.	Collect complete information at submission.
Validation	Make important variables mandatory and validate request information.	Reduce incomplete or incorrect requests.
Approval	Route the submitted RITM to the appropriate approver.	Ensure authorization before fulfillment.
Assignment	Automatically route approved requests to the Transport team.	Avoid manual assignment and delays.
Availability	Allow the transport team to confirm vehicle/rental availability.	Ensure the requested vehicle can be arranged.
Notifications	Send submission, approval, rejection and completion notifications.	Keep requester and teams informed.

Tracking	Use the RITM/request record as the central tracking point.	Provide visibility and auditability.
Reporting	Create reports on requests, status, turnaround time and outcomes.	Support monitoring and improvement.

Step 3: Idea Prioritization

Priority	Solution	Impact	Reason
1 – High	Service Catalog + mandatory variables	High	Creates a standardized request and captures complete details.
2 – High	Automated approval and assignment	High	Reduces manual coordination and speeds up processing.
3 – High	Notifications and status tracking	High	Improves transparency for employees and support teams.
4 – Medium	Availability confirmation	Medium	Helps transport staff confirm fulfillment before completion.
5 – Medium	Reporting and dashboard	Medium	Provides management visibility and performance information.

Selected Solution

Implement the Car Rental Request as a ServiceNow Service Catalog item. The request captures the required travel and vehicle details, creates a Requested Item (RITM), initiates automated approval and fulfillment, assigns approved requests to the Transport team, sends notifications and allows the requester to track progress.

Ideation Phase
Empathize & Discover

Project Name	Car Rental Request Automation in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

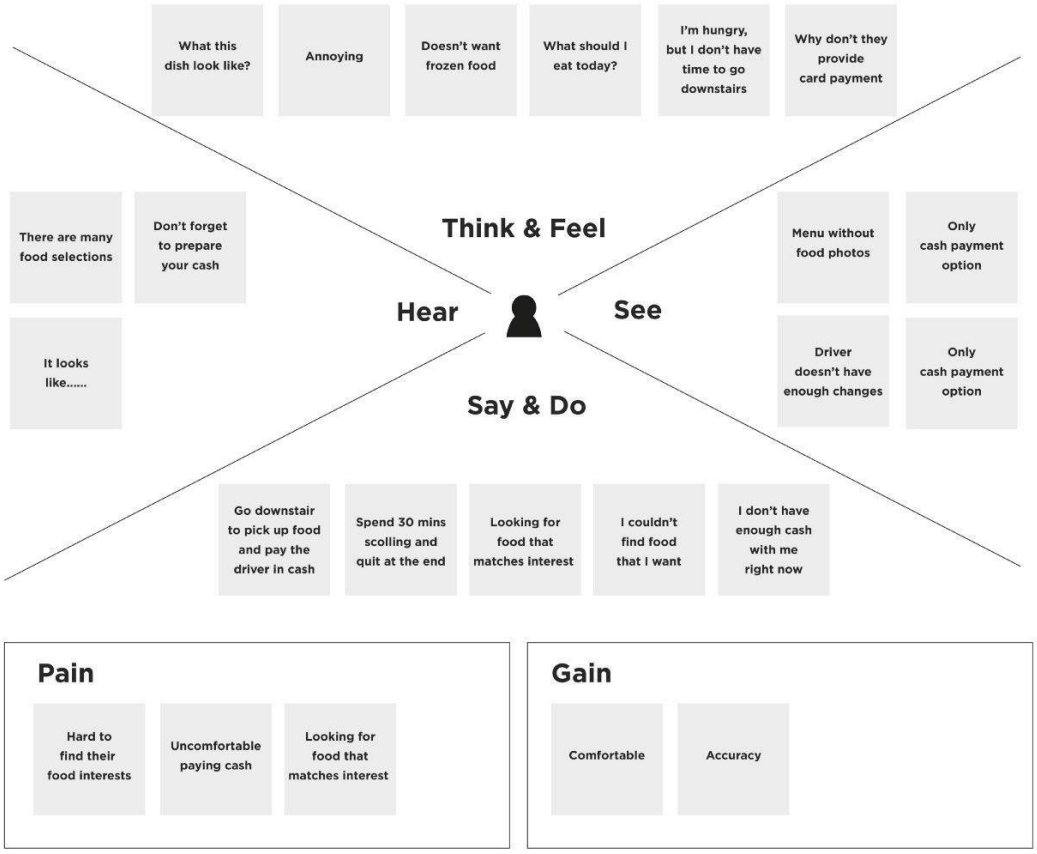

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Reference: https://www.mural.co/templates/empathy-map-canvas

Example: Food Ordering & Delivery Application

Car Rental Request – Empathy Map

Primary user: Employee requesting a rental car for official travel. The map captures the user's needs, observations, actions and emotions during the request process.

Empathy Area	User Insights
SAYS	"I need a car for my official trip." "I want to know whether my request is approved." "I should not have to repeatedly contact the transport team for updates."
THINKS	"Did I provide all the required details?" "Is the car available for my travel dates?" "Who is processing my request and what is the current status?"
DOES	Submits the ServiceNow catalog request; enters travel dates, pickup/drop-off information and car preference; checks the request/RITM status; responds if additional information is requested.
FEELS	Wants the process to be simple and reliable; may feel anxious when approval or vehicle availability is unclear; feels confident when the request status and notifications are clear.
PAINS	Manual emails or calls; repeated follow-ups; incomplete request information; unclear approval status; uncertainty about vehicle availability; risk of last-minute arrangements.
GAINS	One standard ServiceNow form; mandatory and clear

	fields; automated approval; transport-team assignment; timely notifications; transparent RITM tracking; faster and more reliable fulfillment.

Key User Need

The employee needs a simple, transparent and automated car rental request process that confirms what was submitted, shows the approval/fulfillment status and reduces the need for manual follow-up.
